Synthetic Health Data Challenge
Phase I Informational Webinar

Stephanie Garcia, MPH | ONC
Crystal Kallem, RHIA, CPHQ | Clinovations GovHealth
Casey Thompson, MSN, RN-BC | Clinovations GovHealth

February 2, 2021
Introductions

Stephanie Garcia, MPH
The Office of the National Coordinator for Health Information Technology

Crystal Kallem, RHIA, CPHQ
Clinovations
Government + Health

Casey Thompson, MSN, RN-BC
Clinovations
Government + Health
Objectives

• Learn about ONC’s efforts to build Patient-Centered Outcomes Research (PCOR) data infrastructure and capacity

• Understand the value of synthetic health data and the use of Synthea™, an open-source synthetic patient generator

• Understand the structure and requirements of the Synthetic Health Data Challenge

• Learn about tools and resources available to those interested in participating in the Synthetic Health Data Challenge
# ONC Vision, Mission, and Priorities

<table>
<thead>
<tr>
<th>Vision</th>
<th>Mission</th>
<th>Priorities</th>
</tr>
</thead>
</table>
| • A health system that uses information to engage individuals, lower costs, deliver high quality care, and improve individual and population health | • Improve the health and well-being of individuals and communities through the use of technology and health information that is accessible when and where it matters most | • Interoperability of health information  
• Provider burden reduction through increased usability of health information technology (health IT) |
At the Intersection of Research and Care Delivery

• Lead ONC’s scientific efforts and activities

• Recommend scientific policy to the National Coordinator

• Promote and lead activities that spur innovation, support patient-centered outcomes research, and advance precision medicine

https://healthit.gov/topic/scientific-initiatives
Patient-Centered Outcomes Research (PCOR)

- Produce evidence to inform patients’, families’, and their health care providers’ health care decisions

- Patient-Centered Outcomes Research Trust Fund (PCORTF) managed by the Assistant Secretary for Planning and Evaluation (ASPE) supports intradepartmental projects that build data infrastructure and capacity for PCOR

ONC Synthetic Health Data Project
ONC Synthetic Health Data Project

Accelerate PCOR by furthering the development of a synthetic data engine, by:

• Enhancing Synthea, an open-source synthetic patient generator developed by The MITRE Corporation

• Supporting the use of Synthea

• Validating the realism of synthetic health records generated by Synthea

Why Synthetic Data?

• Clinical data are critical for the conduct of PCOR

• Cost, patient privacy concerns, or other legal restrictions associated with using real patient data

• Address barriers to using real patient data and speed development and testing of health innovations
PCOR Priority Use Cases

- Opioids
- Complex Care
- Pediatrics
Synthetic Health Data Challenge

**Prize competition** that invites a wide array of innovators, researchers, and technology developers to **create and test innovative and novel solutions** to cultivate Synthea and the synthetic data it generates

- Advance novel uses of synthetic data for PCOR research
- Validate the realism of Synthea-generated synthetic health records
About Synthea™

• Open-source synthetic patient generator developed by the MITRE Corporation

• Uses publicly available statistical data

• Models the medical history of synthetic patients over a patient’s lifetime

• Outputs realistic (but not real) patient data and associated health records in a variety of formats

• Is free from cost, privacy, and security restrictions and can be used for a variety of purposes in academia, research, industry, and government

https://synthea.mitre.org/about
Synthea Overview

https://github.com/synthetichealth/Synthea/wiki
Synthea Modules

- Contains a generic framework for defining modules using JSON known as the Generic Module Framework (GMF)
- Each module describes progression of states and the transitions between them to model a clinical disease process
- States trigger conditions, encounters, medications, and other clinical events
- Synthea Module Builder is a web interface to support the design of Synthea modules

Limitations of Synthea-Generated Synthetic Data

- Assumes all clinicians act perfectly according to the modeled standard of care
- Focuses on clinical treatments by providers performed within a clinical setting
- May not provide value when analyzing quality outcomes
- The realism of the generated data must be validated

Newly Developed Synthea Modules

Prescribing Opioids for Chronic Pain and Treatment of Opioid Use Disorder
• CDC Guidelines for Prescribing Opioids for Chronic Pain
• American Society of Addiction Medicine National Practice Guideline for Use of Medications in Treatment of Addiction Involving Opioid Use

Cerebral Palsy
• Models the treatment of sialorrhea in cerebral palsy
• American Academy for Cerebral Palsy and Development Medicine Clinical Pathway for Sialorrhea

Spina Bifida
• Models myelomeningocele, the most severe form of spina bifida
• Spina Bifida Association Care Coordination Guidelines

Sepsis
• Models the treatment of sepsis patients
• Surviving Sepsis Campaign Clinical Care Guidelines for Hour-1 Bundle
Challenge Structure and Requirements
Challenge Structure

**Phase I: Proposals for Innovative Models**
- Written proposal describing proposed solution
- Proposals are invited from teams or individuals
- Proposals must include methodology and intended outcomes

**Phase II: Prototype/ Solution Development**
- Approved proposals proceed to Phase II
- Solutions designed and tested
- Final paper describing the solution
- Video demonstration
- Evidence of validation
- Non-proprietary source code

**Winning Solutions**
- Total cash prize pool: $100,000
- Solutions will be judged by a panel based on criteria
- Up to six (6) winners will be selected (first, second, and third place winners)
Entry Categories: Select One

Category I: Enhancements to Synthea
- Development or enhancement of Synthea modules
- Development of solutions that enhance or address limitations of Synthea

Category II: Novel Uses of Synthea Generated Synthetic Data
- Novel uses of Synthea generated data for research and technology development
Phase I Proposals Must:

- Comply with all Phase I submission requirements (registration form, cover page, written proposal)
- Specify one entry category (select one of two options)
- Use Synthea
- Include a synthetic data validation component
- Address one or more of the following use cases: opioids, pediatrics, complex care
- Agree to submit non-proprietary source code as part of Phase II
Phase II
Solution Packages Must Include:

- Cover page, including solution title, organization, contact information, and challenge category
- Final paper describing the solution
- Five (5) minute video that demonstrates the solution and evidence of validation, uploaded to YouTube
- Supplemental documentation or attachments
- Non-proprietary source code

Phase II Proposal Due Date
Phase II Submission Period closes on
July 13, 2021 5:00 PM ET

Late submissions will not be accepted.
Evaluation Criteria: Phase II Solutions

Criterion 1
Impact and Innovation
15 points

Criterion 2
Functionality and Implementation
20 points

Criterion 3
Validation
15 points

Bonus Points
Evaluation Criterion 1

Impact and Innovation

15 points

- Novel, groundbreaking, and/or a creative application of an existing approach
- Enhances Synthea and/or Synthea generated synthetic data
- Impacts the field of research
- Provides new insights on the use of synthetic data for research
- Encourages the use of Synthea and/or Synthea generated synthetic data
Evaluation Criterion 2

- Enhances Synthea functionality and/or addresses known limitations of Synthea
- Supports others with reproducing and/or reusing the solution
- Functions and aligns with the defined objectives of the solution

Functionality and Implementation

20 points
Evaluation Criterion 3

• Supports and/or improves validation capabilities of Synthea
• Improves the clinical relevance of Synthea generated synthetic data
• Supports others with reproducing and/or reusing the validation methods

Validation
15 points
Bonus Points

May be awarded for demonstrating or providing recommendations for the following, in addition to meeting challenge requirements:

- Overcoming limitations of Synthea
- Addressing validation anomalies
- Other recommendations for solutions

Up to 5 points
Prize Breakdown

Total Cash Prize Pool: $100,000

First place winner(s) will receive $25,000 - $50,000

Second place winner(s) will receive $15,000 - $30,000

Third place winner(s) will receive $10,000 - $20,000
Key Dates

Submission Period Opens
01/19/2021 09:00 AM ET

Submission Period Closes
03/02/2021 05:00 PM ET

Phase I

Finalists Announced
03/23/2021 09:00 AM ET
